

**Amendments to the Claims:** This listing of claims will replace all prior versions, and listings, of claims in the application

Listing of Claims:

1. (Currently Amended) In a device of the type for dispensing a fluid spray of the type including a liquid reservoir in the form of a bottle adapted to be gripped by a users hand and a spray mechanism including a dip or siphon tube extending into fluid contained in said reservoir, the improvement comprising: first means disposed proximate a bottom surface of said reservoir, said first means defining a closed space at a location adjacent the bottle of said reservoir to trap a quantity of fluid and prevent said quantity of fluid from spreading along a vertical wall of said reservoir when said reservoir is moved from a vertical to a horizontal position by a user; ~~and said siphon tube positioned so that an inlet end of said siphon tube is below and proximate said first means~~  
  
second means to direct and position said siphon tube to a location with its inlet below said first means and adjacent said bottom surface of said reservoir when said siphon tube is inserted into said reservoir and when said reservoir is in a vertical or horizontal position or a position in between vertical and horizontal.
2. (Canceled) A device according to claim 1 including a second means to maintain said siphon tube with its inlet below said first means and adjacent said bottom surface of said reservoir when said siphon tube is inserted into said reservoir and when said reservoir is in a vertical or horizontal position or a position in between vertical and horizontal.
3. (Original) A device according to claim 1 wherein said first means is a baffle fixed to vertical wall of said reservoir and so constructed and arranged to form a well or second fluid reservoir within said reservoir to trap a quantity of fluid when said reservoir is held in a horizontal position.
4. (Currently Amended) A device according to claim ~~2~~1 wherein said second means is a baffle fixed to opposite side walls of said reservoir, said baffle so constructed and arranged to intercept and position said siphon tube as it enters said reservoir and to permit fluid in said reservoir to flow into said well or second fluid reservoir.
5. (Original) A device according to claim 1 wherein said reservoir is a bottle.
6. (Original) A device according to claim 1 wherein said reservoir is a bottle having a portion adapted to be gripped by a user.
7. (Original) A device according to claim 6 wherein said bottle has said portion proximate an opening to receive and position said spray mechanism.
8. (Original) A device according to claim 7 wherein said spray mechanism is trigger activated.
